

February 2018
Moscow

Despite it is just the beginning of the year Interlight Moscow 2018 exposition has been booked for 65%. The project is considering capacity extension to satisfy the demand.

Interlight Moscow powered by Light + Building is the leading professional event in Russia and neighboring countries and a part of international Light + Building brand presented in the markets of Germany, China, UAE, India and Argentina.

Every year Interlight Moscow demonstrates a whole range of products and modern solutions in the areas of decorative and technical lighting, smart homes and building automation, LED-technologies and electrical engineering from the leading Russian and international manufacturers and distributors.

Ongoing and upcoming big infrastructure projects combined with new sanitary norms for buildings enable market growth and attract foreign companies. The lack of own technologies makes market open for all the import components and expertise.

Decorative lighting and smart technologies markets also thrive for new products — from design and quality perspectives. Increased lighting culture of Russian consumers and professional end-users is the main reason behind this demand.

Following mother-show — Light + Building 2018 in Frankfurt — Russia will not only bring the latest trends in lighting, building automation and electrical engineering but will also evolve two new industry segments:

- Within the "Building Automation and Smart Home" product group, a dedicated **Integrated Security Systems** area will appear.
- **Components** will get special attention and highlight at the exhibition area.

Diverse business program is an essential part of the whole event. The fringe program expects qualitative leap forward to enhance more networking and brand new knowledges from industry achievers.

Interlight Moscow gets official support of the Government (Ministry of Energy, Ministry of Construction Industry, Housing and Utilities Sector), partners with High Schools (State University ITMO, Moscow State University of Civil Engineering, Russian Lighting Research Institute, Moscow Architecture School) and International Assotiations (KNX, WorldSkills, International Association of Lighting Designers).
